

Cemflow Renovation

Fibre reinforced base screed

DESCRIPTION

Cemflow Renovation is self - smoothing, dimensionally stable, and fast drying industrial grade floor topping for upgrading and renovating new and existing internal floors.

Cemflow Renovation is supplied as a pre-blended dry powder designed for application between 5 mm to 50 mm (in one application) to provide a finished industrial floor. Typically, Cemflow Renovation can be pumped up to 1,000 m² per day. Coverage of 400 m² can be achieved when hand applied, dependent upon manpower, thickness applied and equipment used.

APPLICATIONS

Cemflow Renovation is suitable for use in a wide range of industrial environments such as warehouses, food processing plants etc. This screed is suitable for application on various surfaces including concrete floors, screeds, terrazzo, tiles, plywood, timber, and certain types of rigid insulation boards. However, it is important to note that Cemflow Renovation is not a final wearing surface and should be overlaid with finished floor coverings like vinyl laminate, tiles, or carpets.

ADVANTAGES

- › Single component, requires only addition of water.
- › Fast setting.
- › Easy and fast application.
- › Excellent adhesion.
- › High coverage efficiency.
- › Thick application potential.

STANDARDS

Cemflow Renovation complies with EN 13813, Class CT-C30-F7.

METHOD OF USE

SURFACE PREPARATION

Concrete and sand/cement screeds must be sound, dry and fully cured (not subject to shrinkage) and any laitance or surface treatments must be removed by mechanical means such as grit blasting. The surface tensile strength of the substrate should be a minimum 1.5 MPa.

The concrete substrate should be below 75% RH alternatively Strongcoat DPM should be applied. The temperature of the floor must be maintained above 10°C throughout the application and drying of the Cemflow Renovation. Prior to application on to impervious surfaces the area should be thoroughly cleaned and lightly scarified. Any existing surfaces should be well bonded (> 1.5 MPa).

TECHNICAL PROPERTIES:

Working time:	20 - 30 min @ 20°C
Vicat setting time:	3 hr @ 20°C
Foot traffic	3 hr
Light traffic:	24 hr
Compressive strength: EN 13892-2	> 15 MPa @ 1 day > 25 MPa @ 7 days > 30 MPa @ 28 days
Flexural strength: EN 13892-2	> 2 MPa @ 1 day > 5 MPa @ 7 days > 7 MPa @ 28 days
Flow properties using 30 mm ø x 50 mm flow ring: EN 12706	110 – 130 mm
Consumption per mm thickness:	1.8 kg/ m ²
Application thickness:	5 – 50 mm

The perimeter of the room and any columns should be isolated using a compressible strip. For application over underfloor heating please contact DCP Technical Department for specific advice.

PRIMING

TO CONCRETE AND CEMENT SCREEDS

For application onto sand/cement screeds, concrete and other porous substrates, first seal the prepared surface by applying one coat of Cemflow Primer diluted with 3 parts potable water and allow to dry.

Apply a second coat of primer diluted 3:1 by the same method and allow thoroughly to dry. Depending on the porosity of the substrate a further coat may be required.

To confirm if this is necessary a small application area should be undertaken to ascertain the correct priming requirements. As an alternative, Strongcoat Primer may be used.

PRIMING WITH STRONGCOAT PRIMER

Apply one coat Strongcoat Primer and allow to cure. Apply 2nd coat and whilst still tack fully blind with DCP Aggregate at approximately 3 kg/m² until the surface is covered and no resin spots remain. The rate of application is approximately 3 kg/m². Allow to dry fully overnight and remove excess aggregate before applying the Cemflow Renovation.

Cemflow Renovation

TO IMPERVIOUS SURFACES

For application on to impervious surfaces, such as tiles, coatings or onto Strongcoat DPM (please read relevant product technical data sheet). Apply Strongcoat Primer and whilst it is still tacky fully blind with DCP Coarse Aggregate at approximately 3 kg/m², until the surface is covered and no resin spots remain.

Allow to dry fully overnight and remove excess aggregate before applying the Cemflow Renovation.

MIXING

HAND APPLICATION

Use a power-whisk fitted in a heavy-duty slow speed electric drill. Mix in the proportion of 25 kg of powder to 4.0 – 4.5 litres of potable water. Pour the water into a suitably sized bucket and gradually add the powder while stirring, until a smooth, lump free consistency is achieved. Leave to stand for 2 - 3 minutes and mix briefly for 1 minute before applying.

PUMP APPLICATION

Mix the powder and water according to the method recommended by the pump manufacturers. In the case of pumps having a continuous water feed adjust the rate of water flow until the mix is a smooth fluid, uniform grey liquid with no surface separation, producing a flow of approximately 120 mm using a 35cc flow ring. To avoid separation, applications greater than 15 mm require less water and therefore a reduced flow.

APPLICATION

Pour or pump the mixed material onto the prepared surface and allow to attain a smooth finish. The use of a spiked roller will help eliminate entrapped air and smooth out flow lines. Apply at a thickness between of 5 mm to 50 mm in one pass only. Apply floor covering (subject to RH test) over Cemflow Renovation when it is at least 24 hours old. For resin screeds allow at least 72 hours before priming with the appropriate primer.

Where materials are to be applied over the surface of the hardened Cemflow Renovation, it is good practice to STR the surface prior to carrying out subsequent treatments.

CLEANING

Wash tools with water immediately after use.

PRECAUTIONS

- » Do not place when the substrate temperature is below 10°C or when the ambient temperature is 10°C and falling.
- » Protect from frost.
- » Do not exceed the maximum recommended water content and only use potable cold water.
- » This product is not recommended for external use or situations where water may come into direct contact with the cured material.
- » This product should not be applied to asphalt or bituminous surfaces.

PACKAGING

Cemflow Renovation is available in 25 kg paper sacks.

COVERAGE

A 25 kg bag using 4.25 litres of clean water will yield approx. 13.8 litres.

A 25 kg pack of Cemflow Renovation will cover approximately 1.4 m² at 10mm thickness.

STORAGE

Protect from frost and store under dry warehouse conditions at a temperature between 10°C and 30°C.

SHELF LIFE

6 months in unopened bags and stored under good conditions.

HEALTH AND SAFETY

Consult the appropriate Material Safety Data Sheet prior to using each product.

MORE FROM DON CONSTRUCTION PRODUCTS

A wide range of construction chemical products are manufactured by DCP which include:

- » Concrete admixtures.
- » Surface treatments
- » Grouts and anchors.
- » Concrete repair.
- » Flooring systems.
- » Protective coatings.
- » Sealants.
- » Waterproofing.
- » Adhesives.
- » Tile adhesives and grouts.
- » Building products.
- » Structural strengthening.
