

Strongcoat Conductive

Flow-applied electrostatic discharge (ESD) epoxy coating

DESCRIPTION

Strongcoat Conductive is a flow applied solvent free, electrostatic conductive epoxy floor coating especially designed to provide electrostatic control properties to a variety of substrates in wide range of applications.

Strongcoat Conductive comprises of an epoxy primer, conductive base coat and 2.0 mm flow applied topcoat.

APPLICATIONS

Strongcoat Conductive is suitable for use in areas where a static conductive floor is required, such as:

- » Electronic manufacturing facilities.
- » Hospital operation theatres.
- » Hazardous dust and chemical environments.
- » Data processing areas.
- » Military and aerospace facilities.

ADVANTAGES

- » Provide a conductive floor for static electricity to pass through to earth controlling static electricity.
- » Provide anti-spark (spark-proof) whenever required for safety to prevent sparks
- » Alternative smooth finish.
- » Hard wearing surface that can be subjected to heavy foot traffic and forklift traffic.
- » Chemical resistant.

STANDARDS

When applied in accordance with the below stated instruction, Strongcoat Conductive is designed to fulfill the requirements of the following standards:

- » ASTM F150 for conductive flooring range.
- » ANSI/ESD S20.20.
- » DoD 4145.26-M "Contractor's Safety Manual for Ammunition and Explosives".

ELECTRICAL PROPERTIES:

Typical electrical resistance*:

ASTM F150

Surface to surface	2.5×10^4 to 1.0×10^6 ohms
Surface to ground	2.5×10^4 to 1.0×10^6 ohms

* The electrical resistance values are for 2.0 mm thick topcoat when the system is applied in accordance with the mentioned instructions. Failure to follow these instructions may cause differences in these values. Consult DCP' Technical Department for more information.

PHYSICAL PROPERTIES FOR TOP COAT:

Colour:	Variable
Shore D hardness: ASTM D2240	85 ± 5 @ 14 days
Compressive strength: BS 6319, Part 2:1983	≥ 75 MPa @ 7 days
Flexural strength: ASTM C580	≥ 40 MPa @ 7 days
Tensile strength: ASTM C307	≥ 20 MPa @ 7 days
Cure time:	
Foot traffic	24 hr @ 25°C
Vehicular traffic	48 hr @ 25°C
Mixed density:	1.6 ± 0.1 g/cm ³
Pot life:	40 - 60 min @ 25°C
VOC:	< 50 g/ltr

PHYSICAL PROPERTIES FOR BASE COAT:

Colour:	Black
Mixed density:	1.05 ± 0.05 g/cm ³
Pot life:	1 - 2 hr @ 25°C
Tack free time:	2 - 3 hr @ 25°C

Strongcoat Conductive

PRIMING

Priming is required for flooring system only. Concrete substrates should be primed with Strongcoat Primer. The primer should be allowed to cure for 24 hours. Use lambs wool roller to apply the primer. More than one coat may be required for highly porous or textured surfaces.

Self-adhesive copper tape should be firmly applied to the cured Strongcoat Primer so that no part of the floor is more than 2 meters away from the copper tape.

METHOD OF USE

SUBSTRATE PREPARATION

The substrate must be clean, dry, even, dense and free from oil, grease, dust and other contaminations. A clean surface will ensure maximum adhesion between the substrate and the coating.

Concrete floors must have a minimum compressive strength of 25 N/mm² and a maximum concrete relative humidity of 75% (max. moisture content of 4%), relative humidity can be measured by using hygrometers. Concrete relative humidity should be less than 75% for concrete of 28 days old or more.

SURFACE PREPARATION

Unsound layers and contaminated concrete surfaces must be prepared using mechanical surface removing equipment. In case of areas deeply contaminated by oil or grease, such areas should be treated with hot compressed air.

PRIMING

Priming is required for flooring system only. Concrete substrates should be primed with Strongcoat Primer. The primer should be allowed to cure for 24 hours. Use lambs wool roller to apply the primer. More than one coat may be required for highly porous or textured surfaces.

Self-adhesive copper tape should be firmly applied to the cured Strongcoat Primer so that no part of the floor is more than 2 meters away from the copper tape.

Make sure that the perimeter tape is overlapped and applied at 300 - 500 mm from the edge of the wall. Extend the copper tape to adequate number of earthing points depending on the floor area and condition.

Note: For the best results, always use a minimum of 2 earthing points even in small installation.

CHEMICAL RESISTANCE

Occassional spillage after full cure (7 days @ 25°C)

Lactic Acid 10%	R
Oleic Acid sat.	R
Citric Acid 25%	R
Vinegar 10%	R
Sodium Hydroxide 50%	R
Ammonia Solution 10%	R
Sodium Chloride sat	R
Water	R
Chlorinated Water	R
Dead Sea Water	R
White Spirit	R
Xylene	R
Acetone	RS
Benzyl Alcohol	RS
Brake Fluid	R
Diesel	R
Kerosene	R
Sulphuric Acid 25%	R
Phosphoric Acid 20%	RS + SS
Hydrochloric Acid 36%	RS + SS
Nitric Acid 10%	RS

R: Resistant

RS: Resistant with slight discoloration

SS: Slight softening

STRONGCOAT CONDUCTIVE BASE COAT

The Basecoat should be mixed with a slow speed drill and suitable helix type paddle. The entire contents of the base should be added to the hardener and mixed for at least 3 minutes.

Frequently scrape the sides and bottom of the container. When mixed, the Basecoat should be applied to the primed concrete using a proper short hair roller at a rate of 4.5 m²/kg and allowed to cure for 24 hours at normal conditions before being over coated with the topcoat.

Strongcoat Conductive

STORAGE

Strongcoat Conductive has a shelf life of 12 months from date of manufacture if stored at temperatures between 5°C and 30°C.

If these conditions are exceeded, DCP Technical Department should be contacted for advice.

CAUTIONS

HEALTH AND SAFETY

Strongcoat Conductive should not come into contact with skin and eyes.

In case of contact with eyes wash immediately with plenty of water and seek medical advice promptly.

For further information refer to the Material Safety Data Sheet.

STRONGCOAT CONDUCTIVE TOP COAT

Transfer the entire contents of the resin and hardener and colour pack into a separate mixing container and mix them using a jiffy type mixer for 2 minutes until uniform consistency is achieved. Transfer the entire contents of the mixture into a creteangel-type mixer, and start mixing while adding the filler part gradually for two minutes until a uniform lumps-free consistency is active.

Once mixed, the Topcoat should be laid using a V-shape notched trowel or pin leveler at a coverage rate of 3.2 kg/m² to achieve 2.0 mm thickness. Good lighting conditions will assist in even application and spotting the poorly covered areas.

After around 10 minutes of laying the topcoat, it should be rolled using a spike roller at right angle to the direction of laying. After further 15 - 20 minutes, a second spike rolling should be done in a perpendicular direction to the first direction.

For more information about the installation and verification of Strongcoat Conductive refer to the product's Method Statement of contact DCP's Technical department.

PACKAGING

Strongcoat Primer: 5 kg packs.

Strongcoat Conductive Top Coat: 15 kg packs.

Strongcoat Conductive Base Coat: 5 kg packs.

COVERAGE

Strongcoat Primer: 5 m²/kg.

Strongcoat Conductive Top Coat: 3.2 kg/m².

Strongcoat Conductive Base Coat: 4.5 m²/kg.

Actual coverage can vary depending on the substrate conditions.

Strongcoat Conductive

MORE FROM DON CONSTRUCTION PRODUCTS

A wide range of construction chemical products are manufactured by DCP which include:

- » Concrete admixtures.
- » Surface treatments
- » Grouts and anchors.
- » Concrete repair.
- » Flooring systems.
- » Protective coatings.
- » Sealants.
- » Waterproofing.
- » Adhesives.
- » Tile adhesives and grouts.
- » Building products.
- » Structural strengthening.

Note:

We endeavour to ensure that any information, advice or recommendation we may give in product literature is accurate and correct. However, because we have no control over where and how products are applied, we cannot accept any liability arising from the use of the products.
